

Deluxe Griddle

LIGHTING INSTRUCTIONS:

1. Connect the gas hose(s) to the propane tanks. Make sure the green nut on the gas hose/regulator is securely tightened to the tank.
3. Ensure that all valve knobs (black knobs) are in the OFF position (clockwise).
4. Turn on the gas supply valve SLOWLY. WAIT 15 SECONDS. (Do not crack open tank valve like you would a water faucet. Open valve on tanks slowly.)
5. Turn the lighter tube (pilot – red knob) valve to the ON position.
Insert a long stick type lighter into the port on the right side of the grill.
6. Visually check to ensure the lighter tube is burning.
Once the lighter tube has been lit the main burners will ignite off the lighter tube when they are turned on. (Push in black knobs and turn to “high”) The unlit burners will then light automatically.
7. Visually check to ensure that all burners that are intended to be ON are lit.
8. Adjust individual burners as desired.

CAUTION: ALL SURFACES WILL BECOME EXTREMELY HOT
